OpenClaw Income Engine: The Solopreneur Blueprint

10 個高利潤 Agentic AI 自動化部署圖鑑 (Level 1 實戰指南)

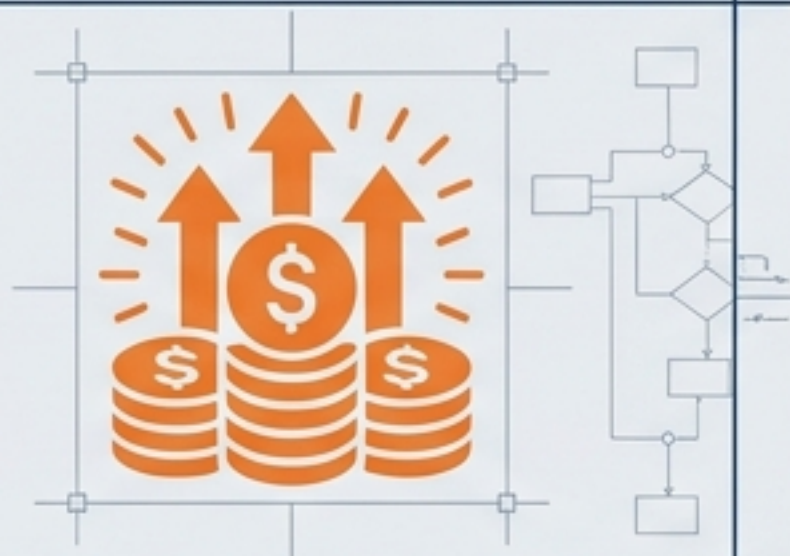

> Initialize Level_1_Engine --mode=production

啟動 Level 1 引擎：從零到變現的最短路徑

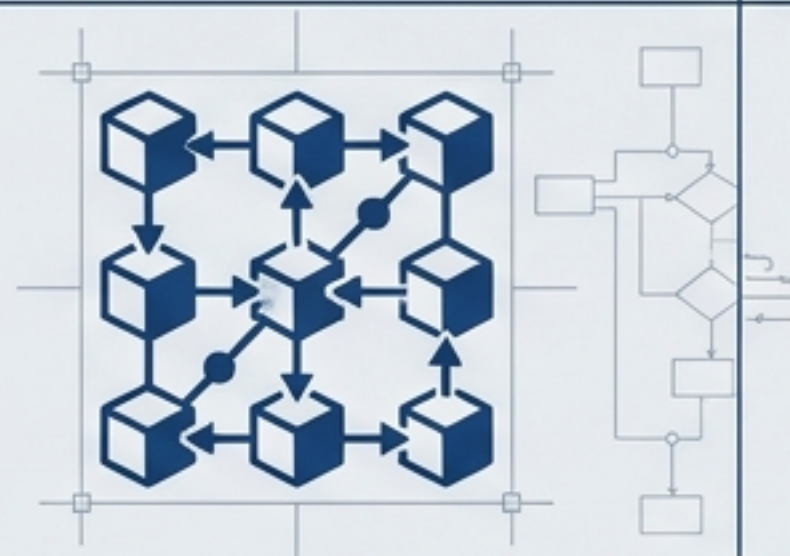

極速部署 (Speed to Market)

每個專案皆被精準設計，確保開發者能在 60-90 分鐘內完成端到端部署與上線。

立即變現 (Immediate ROI)

具備明確的企業客戶報價標準。
每個模組起步價 **\$280-\$400 美金**，並附帶穩定的**月租維護利潤**。

模組化複製 (Modular Scalability)

從 Automation 1 開始，每一個架構模式都會自動成為下一個進進階自動化專案的技術基石。

```
> System Check...  
Speed: OK | ROI: Validated | Scalability: Active
```

  },
  "participant_directory": {
    "enabled": true,
    "note": "Maps speaker labels  
to real names"
  }
}
```

This configuration defines which data points are extracted from the transcript and how participant identities are resolved.

決策與任務解析

Prompt Rules (prompt.txt)

CORE EXTRACTION LOGIC

DECISIONS:

- Extract every explicit decision made during the meeting.
 - Format: "DECIDED: [what was decided] – Owner: [name if stated]"

ACTION ITEMS:

- Extract every commitment and task for each item:
 - Owner:** name of person who committed (or "Unassigned")
 - Task:** description of the action item
 - Deadline:** specific date or timeframe (default: 7 days)
 - Priority:** based on urgency signals (e.g., "urgent", "asap", "by EOD")

PARTICIPANT MAPPING CONCEPY

Prompt uses 'participant_directory' to resolve generic labels like "Speaker 1" to real names, flagging unresolved speakers as "Unknown Participant".

Automation 4: Social Media Content Scheduler (社群媒體內容排程)
